DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Itoh (U.S. Pat. No. 6,497,485) in view of Bradley (U.S. Pat. No. 6,191,893) and Arnold et al. (SID 01 DIGEST). Itoh teaches reflective illuminating optical system, comprising: Polarized Beam Splitters 200 for transmitting the R, G, and B lights, respectively; first, second, and third panels 300 for changing a phase of respective lights transmitted through the first, second, and third PBSs, and reflecting the phase changed lights; and an X-prism 420 for receiving the R, G, and B lights that are reflected twice by the first, second, and third panels first, followed by the first, second, and third PBSs, and combining the R, G, and B lights and permitting the combined lights to incident on a projection lens 500. Polarizer plate 180 is between the x-prism and the PBS. The applicant is directed to review figure 11. All three color paths are projected but the red is separated from the blue and green before the green is separated from the blue (i.e. the red is transmitted while the blue and green are reflected by the first dichroic mirror 512). Bradley teaches from col. 3, line 50 through col. 4, line 13 that the separation may be performed in any

order (i.e. separated blue from red and green first (col. 3, line 55) instead of separating red from blue and green first (col. 3, line 60)). It would have been obvious to one of ordinary skill in the art at the time the invention was made to separate the blue from the red and green as taught by Bradley for the purpose of positional convenience. Itoh does not teach the use of LCoS or wire grid PBS. Arnold et al. teaches that it was known to utilize LCOS panels for smaller pixels at faster rates and to utilize wire grid PBSs for greater angle tolerance and reduced chromatic aberration. It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize the features taught by Arnold et al. for the purpose of reduced costs.

Response to Arguments

Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
